Finador

BEST PRACTICES

Finador is a modern, soft sans serif family. The functional style of a sans-serif has been softened by open apertures and rounded corners. This makes Finador functional and friendly.

As a versatile allrounder Finador supports almost all your needs. It has the ability to become your next favorite workhorse family.

ROOTS

After Julien Fincker's first typeface Bourget – a display font with one weight – Finador was his first multiple weight typeface. The initial sketches were already drawn before and parallel to Bourget, and were quickly discarded. With the learning process in theory and practice, there were so many mistakes in form and craft, that Julien decided to redraw the entire alphabet. During the design process he learned much about OpenType features which increased the character set to over 900 characters. Finador, thus, quickly grew out of its role as a learning typeface and into an extensive allrounder family. It became universally applicable – a real workhorse.

FONT FACTS

- The default version has open, modern apertures. Stylistic Set 2 includes the set of letters with closed, classic apertures. A slightly different look. It's like having a second font.
- The Finador family includes many OpenType features like small caps, ligatures, fractions, alternates and many more.

LEGIBILITY

The thinner and thicker weights are particularly suitable for headlines, while the middle weights can be used for typographic challenges and body text. A large x-height, low contrast and open apertures provide a high level of typographic legibility.
